

TECHNICAL SERVICES

Our mission is to help our clients pay less for energy, and assure reliable, high quality power while saving environment and earning carbon credits and creating sustainable employment.

Our primary focus markets are Canada / USA and India, while secondary markets are based on needs, interest and recommendations of technology and (or) risk partners.

We deliver benefits to clients through following technical and development support services:

1. **Sustainable Energy:**

- Solar and Hybrid (less than 250 KW) for remote communities.
- LED lamps for solar, marine, RV and Transportation.
- Solar power supplies for remote areas, kiosks, telecom, and security.
- Solar water pumps for remote communities and farms.

2. **DG to Net- Metering**

We deliver optimum solution and select from a wide range of distributed generation equipment to maximize clients ROI.

3. **Gas Treatment**

We analyze, specify and select equipment to compress and remove water, hydrogen sulfide, siloxanes, and particulates from the raw gas stream.

4. **Exhaust Heat**

With today's burgeoning energy costs it is necessary to utilize every BTU of available energy. We optimize the use of exhaust heat for facility process thermal loads or increased electricity generation using Organic Rankin Cycles.

5. **CAPTIVE OPPORTUNITIES**

Our network of business contacts and agents allow us to develop strategic alliances between technology companies (or secondary tier of manufacturers & system integrators) and Trans-national companies, OEM and EPC Contractors to add capacity. This helps our clients to access captive opportunities in Canada, USA, UK, Europe and Middle East. To ensure success we stay involved from initial introduction, idea discussions, market research, concept –engineering and team building to continuous participation in local opportunities.

6. **INVESTMENT OPTION**

Our primary focus is clean energy sources that reduce local pollution and emissions of greenhouse gases. We verify the technical and economical viability of investment opportunities for the technology partners and MMC Ontario (an investment holding company). We prepare an option for MMC Ontario to invest in technology companies, secondary tier of manufacturers & system integrators - who wish to be a technology partner in a "proof of concept" site in Ontario, while being nurtured as an India focused Anchor Company.
